In the Abstract

Kindly enter the following into the Official File in place of the Abstract now of record:

A method for preparing a grafted homodetic cyclopeptide froming a framework that defines a grafted upper face and grafted lower face, including synthesizing a linear peptide from modified or unmodified amino acids, some of which carry orthogonal protective groups; intramolecular cyclizing the resulting protected linear peptide; substituting some or all of orthogonal protective groups with a protected precursor; and grafting at least one molecule of interest onto one and/or the other face of the framework via an oxime bond.
